

Fore River Residents Against the Compressor Station (FRRACS)

NoCompressor.com

FRRACS is a community-based group for residents of the South Shore towns who are concerned about the proposed Spectra fracked-gas compressor station in the Fore River Basin.

**NO
COMPRESSOR
STATION**

cancer-causing chemicals
released

What is a Compressor Station:

- Compressors help move fracked-gas along a pipeline, and must be installed every 40-to-100 miles. During normal operations, they emit air and noise pollution.
- This compressor would be built in the *most densely populated location* ever in the US:
 - stations are usually built on 50+ acre parcels, this site is only 4 acres.
- This compressor is part of the *Atlantic Bridge* pipeline project, which Spectra Energy (now known as Enbridge) is building to bring fracked natural gas through New England and into Canada.

What are the Impacts?

- Serious threats to the **health, safety, environment,** and **economy** of the South Shore.
- More serious impacts are felt during periodic blowdowns, during which millions of cubic-feet of untreated natural gas are released into the air.
- There's also a history of catastrophic accidents at similar stations that could paralyze traffic, devastate our waterfront, and put residents at serious risk.

Who has Control?

- There is **no public vote** and **limited public input** in this process - the Federal Energy Regulatory Commission (FERC) has the ability to approve or deny the project.

Join us for our monthly meeting at the Fore River Clubhouse in Quincy at 7pm on the second Tuesday of every month. For more info and ways to get involved, visit: NoCompressor.com
